I picked up a non-functional HP 608D VHF Generator this weekend at the Rochester, NY hamfest. Don't know if it is salvageable or not. The schematic (or manual) would help prior to liberating it as spare parts. Will cover costs of copying. TIA.

Message-ID: <3B1D386F.3157.2A5D041@localhost>

Those of you who care about such things will know that KMI, the west coast AT&T high seas radiotelephone station, has been off the air (along with its sisters WOO and WOM) for more than a year. This is a historic station that goes back to the 20s and once used AM (later SSB) to provide telephone service to ships. It is located "next door" to the KPH receiving station on Pt. Reyes.

The KMI receiving station is located on Park Service land that is part of the Point Reyes National Seashore in California. If all goes well the property will soon be sold to the Park Service. They of course want no part of the maintenance all the towers require nor the responsibility of keeping their aero beacons lit. So the KMI towers will soon be dropped.

Now may be your last chance to see this installation in all its glory. I recommend you arrange your visit to catch the scene at sunset when the towers are silhouetted against the sky and the aero beacons have just turned on. It is a sight to move the heart.

Take Sir Frances Drake Highway towards the Pt. Reyes lighthouse. KMI will be on the right past NMC (big sign) and KPH (no sign). Bring your camera.

Some time ago I purchased a large set of QSTs as part of my effort to put together a complete set. As a result, I have the following years (complete except as noted) available due to duplication with years I already had. Here what I have left after previous offerings:

Condition is good, but they are not mint.

All prices are plus shipping:

These are \$ 15 per year:

1948
1949

1951
1952

1953
1954
1955
1956
1957
1958
1959

1961
1962
1963

1969
1970
1971
1972
1973

These are \$ 20 per year:

1941 (missing Jan)
1942 (missing Nov & Dec)
1943 (missing Jun)
1944
1945

.....

608's are built like Mack trucks, and handle about the same, so there is no question it is salvageable unless it ran off of a cliff. Manuals are available from the usual sources. Be sure to overhaul the "sliding

trombone" attenuator, check the terminating resistor hasn't been toasted to a new value. The pencil triodes, if you should need one or both, are still findable also.

Hi Ed,

Take a look at this site:

<http://www.swedearth.com/harvey/models/1932/19321279-sss.jpg>

(above is all one link)

It shows the Hendricks & Harvey - model Single Signal Receiver from 1932, Hartford, CT. The "Harvey" is the same Harvey and the receiver has a strong resemblance to the one John has, though a few years earlier. Note, in the ad it states they were also custom made.

When I made my guess to John, was just after the Ebay sale ended, and I was working from the Ebay photos, which were not as clear as John's.

Does the museum have this early receiver? I don't know of any existing.

The Vintage Radio and Communications Museum of Connecticut will be holding another flea market and auction this Saturday morning. There are usually some boatanchor pieces there along with the Fadas and Crosleys etc. They are located at 711 Main St. (the old Town Hall Hardware store) in East Hartford. Easy shot from Rt84. Website is :
<http://members.aol.com/radioclctr/> with map and info. The flea is held outdoors in the parking lot, and it looks like it might be good weather that day. It is not a large flea, but if you are in the area, stop in and check it out.

Content-Transfer-Encoding: 7bit

The painters are gone, the carpet installers are gone, and I'm now unpacking some 75 boxes, back into the house from the garage-very slowly... packed them about 3 weeks ago. Last had the house work done when we moved here in 1986. Painters moved the furniture and other heavy stuff.

If you've never been through this, you haven't missed a damn thing enjoyable:-). But it's over, and house looks very nice now.

Culling out ham and computer books, catalogs and old stuff that I will never use... and found a COPY of a Collins Instruction Book, dated 1962. It is for the 136B-2 Noise Blanker for the KWM-2, and is quite readable. I never had Collins gear (except in Vietnam in 1966), so I have no idea where this came from. About ten pages.

I'll send it along (my nickel) to the first person who requests it, directly to me, please. One condition: the 'winner' must agree to make copies for other BAers who may wish a copy, as I don't have time to do this. I will post the name of the recipient and others should please contact him/her directly.

Back to the boxes.

Thanks,

Herb Rosentthal W5AN

A google search on things like "cambric sleeving", "electrical sleeving", etc. turns up lots of manufacturers of a wide variety of types and materials including cotton, cambric, coated fiberglass, etc. Of course, the

manufacturers want you to buy several tons at a time :-)

McMaster Carr carries coated fiberglass tubing, teflon "spaghetti" and some others. Newark has both teflon and PVC (in 100' spools). Antique Electronic Supply has varnished fiberglass in a couple of sizes as well as some "spaghetti" assortments in varnished fiberglass, PVC, etc.

Hi all-

I'm looking for an LS-199 speaker.. this is the Collins speaker that's normally seen with the 75A-X series, the 51Js, etc, with the two horizontal bars above and below the grille... I particularly want one with the mil nameplate LS-199 to go with my URR-23 set (R-388, cabinet.)

I'm also looking for Norden bombsight stuff- complete sights, stabilizers, or any odd parts that anyone might have- I have several right now that I'm trying to resurrect. Any help would be appreciated!

AND- a Collins mechanical filter, F500Z4 (USB, 500Kc) for converting my newly-acquired PRC-47 to LSB!

Thanks guys-

Paul Nelson W5GNF

Subject: Xfrm Winding Interleave

So I have this Bell 2425 entertainment RX w. 2 bad (too bad) 10W
p-p 6V6 xfrms.

Looked @ one carefully & lo & behold some mfgr. took time to wind it so
1st came a plate wdg., then a spkr wdg, then 2nd plate wdg., last a
spkr wdg.

Reason was to minimize phase shift across xfrm & make neg. feedback
stable.

But you cudda knocked me over w. a stick when I found such trouble was taken
with a real cut-corners product!

Anyone seen such?

M
